

Coloplast Products Containing Classified Phthalates

According to the European chemical legislation (REACH) Coloplast is obligated to inform about the products containing classified phthalates in concentrations above 0.1 % (w/w).

According to Coloplast phthalate policy we inform openly about products containing classified phthalates no matter how low the concentration is. These products will therefore appear in the list below.

According to the Medical Device Directive labelling is required if the medical devices

- are intended to administer and/or remove medicines, body liquids or other substances to or from the body, or devices intended for transport and storage of such body fluids or substances.
- contain phthalates which are classified DEHP (diethylhexylphthalate), DBP (dibutylphthalate) and/or BBP (Butylbenzylphthalate). For Coloplast the products presented in this list will be labeled as indicated below.

It is recommended to consult the list **“Alternatives to Coloplast products containing classified phthalates”**
